Composites Science and Technology **33** (1988) 320–321

SUBJECT INDEX TO VOLUME 33

APC2 (carbon/PEEK), 136
Aramid/epoxy composites, 90, 279
Acoustic emissions, 213
Ageing of PMR–15 composites, 186

Boron/epoxy composites, 87

CFRP, 1, 89, 155
CFRP (delamination), 261
Carbon fibre reinforced PEEK, 2, 35, 39, 137
Carbon fibre reinforced polyimide, 177
Carbon/polyimide composites, 88
Ceramic powder/polymer composites, 121
Co-mingled fibres, 100
Compact tension tests, 104
Compression strength, 4
Crack instability, 143
Crack propagation (epoxy resins), 194
Cyclic loading (delamination), 273

DCB tests, 37, 105
DMA (dynamical mechanical analysis), 4
Damage development, 263
Damping (internal friction), 20
Delamination
  laminates, in, 257
  onset, 266
Design methodology (mouldings), 241
Double cantilever beam tests, 37
Drop weight impact, 3
Dynamic impact, 287
Dynamical mechanical behaviour, 4, 21

End-notch flexure tests, 105
Epoxy resins (modified and unmodified), 191

Fatigue (fretting CFRP), 155
Fibre bridging, 143
Filament wound composites, 279
Filled epoxy resins, 193
Film stacking, 100
Finite width correction factors, 69
Fracture
  behaviour of carbon/PEEK, 35
  energy, 7, 135
  mechanics, 97
  properties (epoxy resins), 196
  toughness, 1, 39, 109
Fretting fatigue (CFRP), 155

Glass/epoxy composites, 91

Hertzian contact (fibre composites), 282
Hard object impact, 279

Composites Science and Technology (**33**) (1988)—© 1988 Elsevier Science Publishers Ltd, England. Printed in Great Britain

Impact damage, 3
Implosive consolidation of particulate composites, 121
Interlaminar fracture energy, 99, 113
Internal friction (damping), 20

Kevlar/epoxy composites, 90, 279

Low velocity impact, 279

Matrix resin (role in delamination), 257
Melt-impregnated fibres, 100
Micromechanical analysis, 79
Micromechanisms of crack extension, 191
MMC (metal matrix composites), 295
Modelling fretting fatigue, 172
Modified epoxy resins, 191
Moulding (short-fibre thermosets), 241

Non-destructive inspection, 260

Orthotropic laminates (acoustic emissions), 213

PMR-15 composites, 177
PVC/alumina composites, 129
PVC/silica composites, 121
Particulate composites, 28, 121
Phenolic fibre reinforced thermoplastics, 19
Phenolic fibres, 22
Polyamide matrix composites, 29
Polyimide matrix composites, 177
Polymer/ceramic powder composites, 121
Polypropylene matrix composites, 22
Polystyrene matrix composites, 22
Post-impact properties (CFRP), 10
Powder impregnation, 100

Razor blade fracture test, 136
Relaxation, 1
Residual strength, 1, 12, 13, 183
Residual stresses (metal matrix composites), 295

Short-fibre composites (thermosets), 241
Stick-slip fracture, 200
Stress whitened zone, 206
Surface damage, 289

Thermal cycling (residual strength), 177
Thermoplastic impregnated bundles, 97
Transient elastic waves, 213
Transitions, 1

Unidirectional fibre composites, 79
